

STRATEGO

- Divide students into four equal teams. Each team has a different colored card with a number on it. Each team member needs a card.
- Students run around and tag a member of a different color team.
- When tagged, both students go to the adult with the dry erase board and look at the numbers on their card. The person with the larger number gets the difference in the numbers. (for example the Red team has number 7 and the blue team has number 14. The difference is 7. The blue team would receive 7 points.)
- Students must go and touch the middle cone before they are allowed to start tagging again.
- If a student has number 1 and the other student has a higher number, number 1 always gets the difference.
- Play continues for a few rounds, then switch numbers with your own team.
- Remind students to play within the four cones that mark the play area.
- This station needs two adults to man the dry erase boards. It is best if they stand in opposite corners.
